Science III
Detailed Lesson Plan

Gallano, Dyxalu S.
Student Teacher

Learning Plan in Teaching Science			
Subject	**Science**	**Grade Level**	**3**
Learning Competency/ies	Observe the outer parts of plants such as leaves, roots, stems, and identify their different functions		
Date	**Section**	**Schedule Duration**	**Room**
October 9, 2025	**Jude**	**1 hour**	**31**
Intended Learning Outcome	**Through varied learning activities, with 85% accuracy, the learners will be able to:** • identify and describe the three main parts of a plant (roots, stem, and leaves) and their functions with at least 80% accuracy; • collaboratively label and explain the parts of a plant using plant cards, demonstrating teamwork and correct application of learned concepts; • show appreciation for the importance of plants by creating and presenting a pledge about why we should care for and value them.		
Instructional Materials	mini chalk board/white board, plant diagram, plant model, plant cards, powerpoint presentation *https://www.canva.com/design/DAG0-C1bY58/Ip-zEH2zWLzMF-pnPrEVag/edit?utm_content=DAG0-C1bY58&utm_campaign=designshare&utm_medium=link2&utm_source=sharebutton*

		Teacher's Activity	Student's Activity
Stimulating Activities	Prayer and Greetings	The teacher and pupils will follow the schedule of the assigned prayer leader, which was set at the start of the second quarter and arranged in alphabetical order. The prayer leader for the day is already aware of their turn and is prepared to lead the class. "Good morning, everyone. Who will be the prayer leader today?" "Good morning, everyone. It is nice to see you today. Please be seated."	*The pupils will mention the name of their classmate to lead the prayer. Then, the pupil will proceed to the front.* "Classmates, are you ready to pray?" "Yes, we are ready to pray." *Everyone:* "Let us put ourselves in the holy presence of God." *Then, proceeds to pray the "Science Prayer"* "Good morning, Ma'am Gallano, Sir Guillen, and visitors. It is nice to see you today." "Thank you, Ma'am"
	Attendance/ Classroom Rules and Reward System	The teacher will directly ask the students how many pupils are absent and how many are present. "Let me check your attendance first. Who is absent today?"	

		"If (student's name) is absent. How many boys are present? Now, how many girls are present? So, how many pupils are there in our class in total?" The teacher will present the classroom rules, remind students about the consequences if pupils fail to follow it, and receive rewards if they manage to do well in class. "Let's review our classroom rules. These rules will guide us in becoming responsible and respectful pupils. Do you still remember and follow my B-E-L-L classroom rules?" "Okay, very good. Again, B – means Be respectful: Always use kind words and actions toward your teacher and classmates. E – means Engage in class: Participate actively, raise your hand, and do your best in every activity. L – means Listen carefully: Pay attention to instructions so you can understand and follow our lessons well. L – means Learn safely: Take care of yourself and others, keep our classroom safe, and use materials properly. If you fail to follow these rules, there will be consequences, such as losing suns. But if we follow them, you will receive rewards by first getting suns. Remember, if your group get only 1 sun at the end of the class, you will receive candies	*Pupils will mention the name of who is/are absent* *Pupils will say the number of pupils who are present.* "Yes, Ma'am"

		of your choice, but if you get 2 to four suns, your group will get biscuits, and if your group will get 5 stars above it means you behave very well and follows the classroom rules, your group will get school materials as rewards. ” “Am I understood?” “Okay, very good.”	“Yes, Ma’am”
	Engage (Connect to living and non living thing)	“Before we start our Science lesson, let's play a fun word game–Hangman*!* The secret words we’ll guess are connected to our lesson today. Let’s see if you can figure them out!” “I’ll write blank spaces on the board. Each blank stands for one letter of the secret word. Each group will take turns guessing a letter. If your letter is correct, I’ll write it in the blank. But if it’s wrong, we’ll add one part to our Hangman drawing. If the picture is completed before you guess the word, the game ends! But if one group guesses the word first, they win and earn a star!” *(The teacher writes word blanks on the board and begins the game. Secret words: plant, roots, stem, leaves.)* “Great job, everyone! The words we guessed were plant, roots, stem, and leaves. And these are all parts of a plant. Now let me ask you, is a plant a living or a nonliving thing?” “Very good! Plants are *living things* because they grow, need water and	

		sunlight, and can make their own food. How about the soil, the pot, or the sunlight, are they living or nonliving things?” “Correct! Nonliving things don’t grow, breathe, or need food. But even though they don’t live, they help plants, which are living things, to survive. Isn’t that amazing? Living and nonliving things actually work together!” *(Teacher continues with a transition to digital connection.)* “Have you played Plants vs. Zombies?” “Let us watch a short video about the game first, so that you will have an idea what the game is all about.” https://youtu.be/CHAbHz8iYHc After watching the video, teacher will say: “In the game each plant has a special power to protect the garden. But in real life, plants also have their own powers or parts that help them live and grow. They may not	“Leaves!” “Stem!” “Roots!” “Living thing!” “Non-living things!”

		fight zombies, but their roots, stems, and leaves help them survive every day." "So, just like in the game, where plants and other elements work together, in real life, living things (like plants and animals) depend on nonliving things (like water, air, and sunlight) to stay alive. Isn't that cool? Now, let's explore more about how living and nonliving things are connected!"	"Yes, Ma'am" *Some pupils will answer:* "No, Ma'am"
	Explore	After playing the "hangman game", students already guessed some words related to plants, then the teacher will say: "Now, let's step into the garden, the world of *Plants vs. Zombies*! Just like in the game, our plants need us to know their special powers so they can protect the garden. But this time, instead of fighting zombies, our mission is to discover the powers of real plants. Are you ready to enter the garden?" The teacher will now present a plant diagram.The pupils will carefully explore the diagram and point out the different parts they can see, such as roots, stems, leaves.	"Yes, Ma'am! We're ready to protect the garden!"

		 “Class, here is a plant diagram. Look carefully. What plant parts can you see? Do you notice the roots, stems, leaves?” To make the activity more exciting, the teacher will say: “In *Plants vs. Zombies*, you recognize plants like the Peashooter, Sunflower, or Wall-nut because of their special powers. Real plants also have powers hidden in their parts and today, we’re going to discover them.” The teacher will then invite some pupils to come forward and place labels on the diagram, naming what they think each part is called. “Who would like to come forward and place the labels on the diagram? Try to name the parts you see.” The teacher will then say: “Now, you have labeled the body parts of a plant. What do you think	“Roots!” “Leaves!” “Flowers!” “Stem!” “Fruits!” *Selected pupils come forward and place labels on the diagram, matching the names to the correct plant parts.*

		will be our topic for today? *(wait for pupils to answer)*. It is Plant Parts and its Functions. Now, let us discuss and talk more about it.”	“Plants, Ma’am”
Explain (identify and describe the three main parts of a plant (roots, stem, and leaves) and their functions with at least 80% accuracy.)	“Again, we are going to talk about parts of a plant and its function. So, you are going to identify and describe the three main parts of a plant and tell what each part does, work together in groups to label and explain the parts of a plant using plant cards and models, and show love and care for plants.” “Alright, class! We talked about living and nonliving things, and we saw how plants are living things. Now, before we continue, what comes to your mind when you hear the word *plant*? What do you know about plants?” *(The teacher will allow students to share their ideas.)* “Those are wonderful ideas! Plants are indeed living things. They grow, they need sunlight and water, and they can even make their own food. Now, let’s try to define what a plant is. Everyone, please read together what’s on the screen.”		“Plants are green” “They grow” “They have leaves” *(Pupils will read the definition on the PPT)* “Plants are living organisms that are able to produce their own food through photosynthesis. They come in a wide variety of shapes, sizes, and colors. They provide food and oxygen for many other living things.”

	"Very good! Since plants are made of many tiny parts, we are going to explore their main parts and learn what each one does or as I like to call them their *superpowers!*" "Before I tell you, can anyone name some parts of a plant that you know?" "Excellent! Today we will focus on the three main parts, the roots, stem, and leaves. Each part has a special job just like heroes in a game!" "Let's start with the first one. What do you think roots do for the plant?" "Great ideas! Now, please read the definition of roots." The teacher will explain that plants have parts with special jobs while presenting the powerpoint presentation and showing the plant model. *(The teacher will ask the students to read the definition of each term, then explains it)* "Roots are often found below the soil. They absorb water and nutrients from the ground and help the plant stay firm. Some roots also store food for the plant's growth."	*(Students answer: roots, stem, leaves, flower, fruit, etc.)* *(Let students answer)* "They drink water" "They hold the plant" "They're under the ground." "Roots are often found below the surface of the soil. They absorb water and nutrients from the ground. They also anchor the plant in place. Some roots store food and nutrients for the plant's growth."

	(The teacher shows a picture of roots.)   "In *Plants vs. Zombies*, the roots are like the *Sunflower*! You don't always see it fighting, but it gives energy and keeps the garden alive. Roots are the plant's hidden power!" "Now, what about the stem? What do you think is its job?"	*(Students respond)* "It helps the plant stand" "It carries food"
	"Okay, very good. Now, please read the definition." "The stem works like a highway. It carries water and food to all parts of the plant and helps the plant stand tall." *(The teacher shows a picture of the stem.)*	"Stems are found above the ground. They provide support to the plant by holding up leaves, flowers, buds, and fruits. They also transport water, nutrients, and minerals to different parts of the plant."

	“In the game, the stem is like the *Wall-nut*! It stands strong, holds its ground, and supports the team.” “Last one! What do you think the leaves do?” “Wow. You know a lot about plants. Now, let us read the definition.”	*(Students respond)* “They make food,” “They are green” “They use sunlight” “Leaves are flat and thin structures attached to the stem of a plant. They produce food for the plant through the process of photosynthesis. They also help regulate the exchange of gases with the

	"Leaves act like tiny kitchens. They make food for the plant through *photosynthesis* that means they use sunlight to turn water and air into food." *(The teacher shows a picture of leaves.)* "In the game, the leaves are like the *Peashooter*, always active, hardworking, and full of energy!" "Now, who can tell me the 4 main parts of a plant and their superpowers or functions?" "Okay, very good." *(At this stage, the teacher brings out a plant model that can be taken apart and reassembled. The teacher begins by removing the pieces one by one, showing roots, stems, leaves.)* "Great job! Let's try something fun. I have here a plant model that can be taken apart. I'll call some volunteers to help me reassemble it."	surroundings." "Roots, Stem, Leaves!" *Some pupils may be invited to come forward and help attach a piece back*

	As each part is added back, the teacher says: “Look at that! When we put all the parts together, we see how each part helps the plant live and grow. Each one has an important job.” “In the *Plants vs. Zombies* game, plants protect the garden from zombies. In real life, each part of a plant works together to keep the plant alive and plants help protect life on Earth by giving us food and oxygen. That’s their real superpower!”	*to the model, saying what the part is called.* *Pupils who volunteered will also recall the functions:* “The roots drink water.” “The stem carries food.” “The leaves make food.”
Elaborate (collaboratively label and explain the parts of a plant using plant cards and models, demonstrating teamwork and correct application of learned concepts.)	The teacher will divide the class into groups and provide each group with a plant card. 	

	  The teacher gives instructions: “Each group will color and label the parts of the plant on your card. Then, talk with your groupmates, write one function or ‘superpower’ for each part, and lastly, I want each group to make a 1–2 sentence pledge about why we should care for and value plants. Think of it like your strategy in “*Plants vs. Zombies*” you need your plants strong and healthy to win the game, and in real life, we need strong and healthy plants to survive.” “Am I understood?” “Okay, very good.” The teacher will give each group a plant card. “Now, every group already has their plant card. Start answering and do it quietly.”	“Yes, Ma’am”

	After completing the task, groups will pick someone to present their work to the class. "In *Plants vs. Zombies*, each plant has a role, some defend, some attack, and some give energy. In real life, each part of the plant has a role too. Roots drink water, stems carry food, and leaves make food. That's why we should value them, because plants are the real heroes of life on Earth." "Before we end our lesson, let's talk about our character value for the month, which is Responsibility. Responsibility means doing what you are supposed to do and taking care of the things and people around you. It's about being trustworthy and doing your best, even when no one is watching. The Bible says in Philippians 2:4, 'Each of you should look not only to your own interests, but also to the interests of others.' That means we should not just think about ourselves, but also take care of others — including God's creations like plants and nature. So, I hope after this lesson, we can apply this value in our everyday life, and somehow find ways to relate it to what we are going to learn today."	*Every group will present their work in front.* *As other groups present, students listen and compare their work with their classmates.*
Evaluation (Show appreciation for the importance of plants by creating and presenting a pledge about why we should care for and value them.)	The teacher says: "Class, the zombies are coming! Before we can defend our garden, we need to make sure our plants are strong and ready. I will call at least five defenders to answer these questions. Let's see if you are ready for the final mission!" The teacher asks the following questions one by one: 1. "In the game, Sunflower quietly gives energy to the team. In real life, which part of the plant works like this by	*Pupils listen attentively and volunteer or are called to answer.*

	giving strength through water and nutrients?” 2. “The Peashooter in the game attacks by shooting peas. Which part of the plant makes food and energy for the plant, just like the Peashooter gives power to the garden?” 3. “The Wall-nut stands strong and supports the garden. Which plant part stands tall and carries food and water to the other parts?” 4. “In *Plants vs. Zombies*, plants protect the garden. In real life, how do plants protect us and why should we take care of them?” “Very good defenders! You see, every plant part has its own superpower, just like in *Plants vs. Zombies*. In the game, plants save the garden from zombies, but in real life, plants save us every day by giving us food, air, and life. That’s why we must value and protect them.”	“The roots, because they absorb water and nutrients from the soil.” “The leaves,because they make food through photosynthesis.” “The stem, because it supports the plant and transports food and water.” “Plants give us food, oxygen, and shelter. We should take care of them because they help us live.”
Closing	After students answer, the teacher reinforces and concludes: “That’s all for our class today. I hope you learn something. Before I leave you for your next class, align your chairs and tables. Heads down while waiting for the next teacher. Say goodbye and thank you…”	“Good bye and thank you, Ma’am Gallano. See you

	“See you tomorrow.”	tomorrow.”
